Direct Submission

Submitted (01-MUG-2001) Takuji Sasaki, National Institute of Agrobiological Resources, Rice Genome Research Program; Kannondai 2-1-2, Tsukuba, Ibaraki 305-8602, Japan (E-mail:tsasaki@nias.affrc.go.jp, URL:http://rgp.dna.affrc.go.jp/, Tel:81-298-38-7444], Fax:81-298-388-7468)

The nucleotide sequence of this BAC clone was generated by combining Monsanto and RGP-Japan sequencing data.

NOTE: It currently consists of I contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them
                                                                                                                                                                                 Sasaki,T., Matsumoto,T. and Yamamoto,K. Oryza sativa nipponbare(GA3) genomic DNA, clone:01077_A12

Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence.

NOTE: It currently consists of l contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

The set of genes are used for the analysis of the pattern of peroxidase gene expression in particular rice plants and their component tissues and under different environmental conditions, and modification of rice plants to provide desired specificities of peroxidase gene expression to impart particular characteristics to the plants such as response to bacterial infection by Magnaporthe grisea.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a set of peroxidase genes found in plants, especially rice, and their homologues, modified forms and fragments, where the sequences of the peroxidase genes in the set are given in AAH44071 to AAH44091. Also described are: (1) promoters for the control of the gene set; (2) the preparation of cassette vectors using the genes and promoters; (3) analysis of plant characteristics using the peroxidase set by isolating RNA from the plant, binding the RNA to a peroxidase set by isolating RNA from the plant, binding the RNA to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New set of rice peroxidase genes for analysis of peroxidase exin rice under varying conditions and production of rice plants desired characteristics \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; Page 152-155; 258pp; Japanese

Also described are: (1) promoters for the control of the gene set; (2) the preparation of cassette vectors using the genes and promoters; (3) analysis of plant characteristics using the peroxidase set by isolating RNA from the plant, binding the RNA to a membrane, mixing with a labelled peroxidase gene set, incubating, and detecting the label signal to show which genes in the set are expressed in the sample plant; and (4) DNA microarrays for peroxidase gene expression analysis. The set of genes are used for the analysis of the pattern of peroxidase gene expression in particular rice plants and their component tissues and under different environmental conditions, and modification of rice plants to provide desired specificities of peroxidase gene expression to impart particular characteristics to the plants such as response to bacterial infection by Magnaporthe grisea.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Db
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DЪ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            QY
                                               The present invention describes a set of peroxidase genes found in CC plants, especially rice, and their homologues, modified forms and CC fragments, where the sequences of the peroxidase genes in the set are CC given in AnH44071 to AnH44091. Also described are: (1) promoters for the CC control of the gene set; (2) the preparation of cassette vectors using the genes and promoters; (3) analysis of plant characteristics using the CC peroxidase set by isolating RNA from the plant, binding the RNA to a CC membrane, mixing with a labelled peroxidase gene set, incubating, and CC detecting the label signal to show which genes in the set are expressed CC in the sample plant; and (4) DNA microarrays for peroxidase gene CC expression analysis. The set of genes are used for the analysis of the CC pattern of peroxidase gene expression in particular rice plants and CC their component tissues and under different environmental conditions, CC and modification of rice plants to provide desired specificities of CC peroxidase gene expression to impart particular characteristics to the CC plants such as response to bacterial infection by Magnaporthe grisea.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ohashi Y,

New set of rice peroxidase genes for analysis of peroxidase in rice under varying conditions and production of rice plan desired characteristics - $\footnote{`}$ plants expression

Claim 1; Page 189-192; 258pp; Japanese.

The present invention describes a set of peroxidase genes found in CC plants, especially rice, and their homologues, modified forms and CC fragments, where the sequences of the peroxidase genes in the set are CC given in AAH44071 to AAH44091. Also described are: (1) promoters for the CC control of the gene set; (2) the preparation of cassette vectors using CC the genes and promoters; (3) analysis of plant characteristics using the CC peroxidase set by isolating RNA from the plant, binding the RNA to a CC detecting the label signal to show which gene set, incubating, and CC detecting the label signal to show which genes in the set are expressed CC in the sample plant; and (4) DNA microarrays for peroxidase gene CC expression analysis. The set of genes are used for the analysis of the pattern of peroxidase gene expression in particular rice plants and CC their component tissues and under different environmental conditions, CC cand modification of rice plants to provide desired specificities of CC peroxidase gene expression to impart particular characteristics to the CC plants such as response to bacterial infection by Magnaporthe grisea.

Sequence 1223 BP; 234 A; 397 C; 338 G; 254 T; 0 other;

```
CC a molecular genetic marker. (I) can be used for modifying lightin cell controlled prepared to make the controlled plant to manipulate cell controlled problem and controlled plant to manipulate cell controlled problem and controlled plant to manipulate cell controlled problem and controlled plant species, as controlled problem to screen libraries from the desired plant. Short controlled problem are useful in amplification protocols controlled problem and controlled colds or its fragments encoding homologous genes from DNA or RNA. (I) or its fragments encoding homologous controlled problem and controlled colds or its fragments and the malecular controlled problem and in marker assisted selection, particularly in tregrass and fescues, and in forage and turf grass improvement, e.g. contagging QTLs for herbage quality traits, dry matter digestibility, controlled stress tolerance, disease resistance, insect pest resistance, plant stature, leaf and stem colour. The present sequence from the present controlled present controlled
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel nucleic acid encoding lignification and cellulase enzymes their related enzymes useful for modifying lignin biosynthesis cellulose degradation in plants to manipulate plant cell wall
